

Software Engineer III | 6+ Years of Experience

Email: ayushgarg05@gmail.com | Phone: +91 9479356841 |

LinkedIn: <https://in.linkedin.com/in/ayushgarg05> | Website: <https://findayush.com> |

Location: Noida, India

Professional Summary:

Software Developer with 6+ years of experience in designing scalable backend systems, AI-powered applications, and cloud-based solutions. Proficient in Python-based frameworks, microservices architecture, and data-driven automation. Adept at optimizing cloud deployments, implementing high-performance APIs, and collaborating with cross-functional teams to deliver business results. Passionate about leveraging and integrating AI/ML techniques to drive innovation in enterprise applications.

Technical Skills:

- **Programming Languages:** Python, Java
- **Backend Development:** Flask, Django, FastAPI, REST & GRPC APIs
- **Databases:** PostgreSQL, MongoDB, MySQL, Couchbase
- **Cloud & DevOps:** Kubernetes, Docker, Google Cloud Platform (GCP), Azure Blobstore
- **AI & ML Integration:** Langchain, MLServer, Whisper/Qwen Model, FAISS, MLFlow
- **Automation & Workflow:** Apache Kafka, Argo Workflow, Netflix Conductor
- **Leadership & Collaboration:** Code reviews, Mentorship, cross-functional collaboration.

Work Experience:

Innovaccer Inc. – Software Engineer III (Jul 2025 – Present), Noida

- Developing AI-driven Prior Authorization and Utilization Management solutions for the US healthcare ecosystem ensuring HIPAA compliance, data security, and adherence to US healthcare standards (FHIR, HL7).
- Designing end-to-end system architecture and implementing LLM-powered workflows, intelligent agents, and decision automation systems using Generative AI, NLP, and machine learning to reduce administrative burden and accelerate clinical approvals.
- Building scalable, secure, and fault-tolerant backend systems with a focus on microservices architecture, distributed systems, and cloud-native design.
- Contributing to next-generation healthcare technology initiatives focused on improving clinical efficiency, care delivery, and patient outcomes.

JIO Platforms – Software Engineer III (Nov 2022 – Jul 2025), Bangalore

- Project: Batch Processing System for Asynchronous Job Execution
 - Built REST APIs enabling users to submit and manage batch jobs.
 - Implemented Apache Kafka for event-driven processing and Argo Workflow for orchestration.

- Containerized using Docker and Deployed on Kubernetes, the system currently handles 10K+ job requests daily.
- Project: Real-Time Speech-to-Text System
 - Developed in Python using GRPC protocol, leveraging the Whisper LLM for transcription, and deployed on GCP with MLServer for efficient model serving across all Reliance Foundation Hospitals.
 - Currently live and supporting 5 regional languages to transcribe doctor-patient conversations, enhancing documentation accuracy and accessibility.
- Project– Audio Insights Generator for Jio Call Center.
 - Engineered the pipeline utilizing Speech-to-Text, Language Translation, and Emotion Detection to extract actionable insights.
 - Currently analyzing - 20,000+ call center recordings daily and generates insights from them.

American Express – Software Developer II (Oct 2020 – Nov 2022), Bangalore

- Automated KYC document processing using Spring Boot REST APIs and ML-driven OCR, reducing manual effort by 30%.
- Optimized workflow automation systems, ensuring compliance and improving API performance.
- Designed an NLP-powered Email Classification System, reducing manual email processing time by 45%.

American Express – Software Developer (Jul 2019 – Oct 2020), Bangalore

- Developed Python-based automation workflows integrating Netflix Conductor and O365 APIs, streamlining customer query handling.
- Built a Fraud Detection System leveraging machine learning, preventing ~\$10M in fraudulent transactions.

American Express – Intern (Jan – June 2019), Bangalore

- Built an automated duplicate invoice detection system, saving ~\$10M in fraudulent transactions in the US market.

Hike Messenger – Intern (Jun – Jul 2016), Bangalore

- Engineered a Python parser that analyzed Android activity logs, identified performance bottlenecks, and automatically generated reports, improving app responsiveness by 15% and reducing crash rate by 8%.

Education:

- **M.Tech, Software Engineering** – Birla Institute of Technology, Pilani (2021 – 2023)
- **B.Tech, Computer Science** – Vellore Institute of Technology, Vellore (2015 – 2019)
